Hayward® HCF Series Bobbin Wound Filters

Hayward® Commercial Sand filters are made from bobbin-wound glass-fibre yarn impregnated with polyester resin (GFRP technology).

Available in diameters from 1050mm – 3000mm with

various filtration speeds and in pressure ratings of 2.5 bar, 4 bar, 6 bar and 9 bar; with or without valve batteries.

All filters come with top manholes, pressure gauge and arm collectors. Options include side manhole, air relief valve and sight glass. The filters are ideal for very large pools, water parks, and industrial water treatment.

VITRAFIL® Pro Glass Filter Media

VITRAFIL® Pro is a filtration medium that replaces regular filter sand. It's developed from white glass sand recovered from glass windows to be used in a single layer with just one granulometry to help retain 99.64% of particles between 1 and 50 micron as per official IFTS tests.

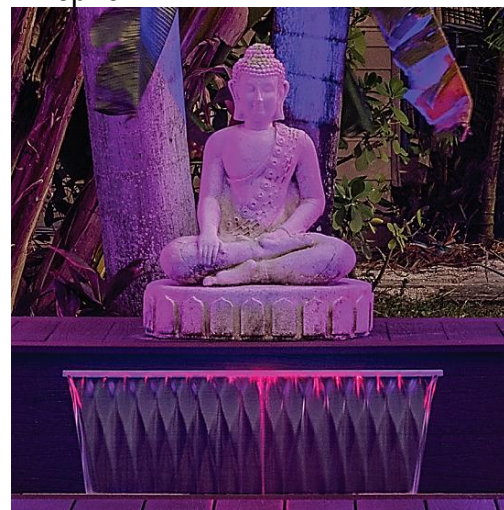

VITRAFIL® Pro is highly resistant to wear and provides long-lasting life span in pools. Officially certified NSF/ANSI 61, it's harmless and safe to handle with micro-grinding eliminating sharp and cutting edges.

The load loss of the hydraulic system is minimized and consumption of chemical products is reduced up to 50%. The microscopically flat surface of **VITRAFIL® Pro** particles prevents the proliferation of bacteria and seaweed that degrades the filter medium. **VITRAFIL® Pro** Ships from Europe.

Illuminated LED Sheers - Inspire BETTER.

Illuminated LED Sheers help transform any pool into a sophisticated aquatic escape with mesmerizing water effects in a variety of colors, shapes and designs made to complement any aesthetic.

Sheer with Light insert

Enhance any pool's ambience with soothing sights and sounds.

The industry-first top-access light eliminates light loss, regardless of length and is available in lengths from 1' to 8' for straight, curved or custom wall surfaces.

Can be used with **Omni®** automation and **OmniDirect™** Mode for better illumination and with Hayward variable speed pumps for greater versatility.
