

ParaSkimV[®]

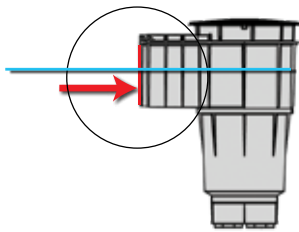

Venturi Skimmer

SMARTER SKIMMING. LESS ENERGY

ParaskimV delivers powerful skimming performance—even at lower pump speeds—so you can maximize energy savings without sacrificing a clean pool. Its advanced venturi design enhances surface debris removal and allows full suction to the main drain for improved cleanup of heavier particles. Designed for convenience, the offset venturi provides easy access for vacuum connections and pairs seamlessly with in-floor cleaning systems for optimal circulation and efficiency.

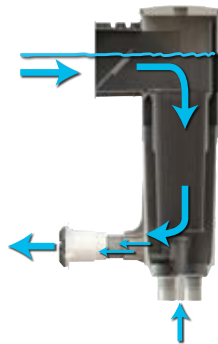

STANDARD SKIMMER

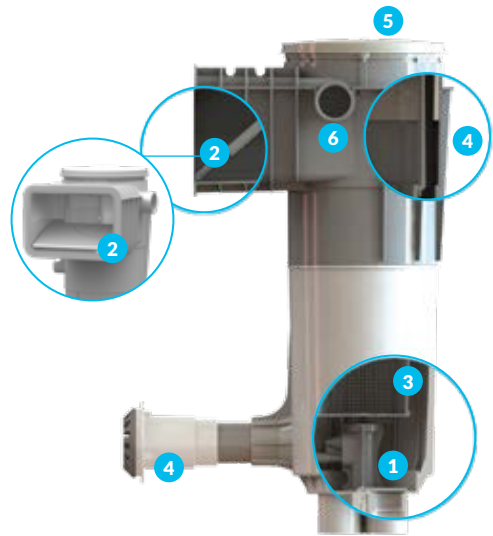

At low speeds, insufficient flow is produced, causing all debris to accumulate outside the skimmer door.

ParaskimV Venturi Skimmer

Generates nearly identical flow rates regardless of the pump speed, so debris is constantly being removed from your pool.

Featuring a streamlined and elegant design, the ParaskimV venturi nozzle allows the skimmer to maintain nearly consistent flow rates regardless of pump speed. This means you can benefit from the energy efficiency of a multi-speed pump without compromising skimming performance or the cleanliness of your pool.

HIGH-PERFORMANCE FEATURES & ENERGY SAVING DESIGN

- 1 VENTURI NOZZLE**
 - » Effective skimming even at low pump speeds
 - » Lowers energy costs
 - » Offset design allows easy vacuum hose connection
- 2 WEIR DOOR DESIGN**
 - » Notched design for better flow at lower pump speeds
 - » Less potential for debris to become trapped
- 3 DEBRIS BASKET**
 - » Largest on the market means less maintenance
 - » Includes fine mesh bag for fine debris removal
- 4 SAFEST VENTURI SKIMMER AVAILABLE**
 - » Interior vacuum relief and return guard cover provide additional layers of safety
 - » Vent is located high in skimmer above water level so less likely to be blocked by debris in skimmer.
- 5 DECK LID**
 - » Slotted ring allows for a fully open skimmer throat
 - » Ring design maintains unobstructed water flow
 - » Compatible with poured concrete and paver deck applications
 - » Available in white, beige, and light gray
- 6 OVERFLOW PORT**
 - » Largest on the market (1 1/2" or 2" vs competitions (3/4" to 1"))
 - » Optional use in high storm regions
